

OFDP Updates 5.0.1.9 to 5.0.2.1

From DevWiki

OFDP Updates 5.0.1.9 to 5.0.2.0

- **Inline Bold in FireFox** -- The generation of the HTML for the inline style changes in general (not just Bold) was modified to work with the interpretation by FireFox as well as IE versions.
- Fixed problem in some converted multi-page files that did not allow the tab order to be set correctly.
- Added option in Advanced field Input tab to support numeric fields with Parenthesis or Red Color to indicate negative values. This is implemented in a manner that the database stores the negative value as-is and the HTML and PDF displays are modified to display the desired formatting. Specification is as below:

EForm Field Properties

CustomInfo and Event Code | Validation | Measurements

Field ID | DataBase | Security | **Input** | Print | Dim/Steps

Text:

Text Qualifier:

Max Chars: Max Lines: ☐ Check Spelling on Dbl Click

Date/Time:

Date Qualifier: Initial Value:

Custom Date:

Time Qualifier:

Numeric:

Max Digits: Decimal Pos: ☐ Allow Zero

☒ Use Pares ☒ Use Red Text

Numeric Format:

Desc:

- Added support for option to use custom data selection to specify dates as DD/MM/YYYY.

EForm Field Properties

CustomInfo and Event Code | Validation | Measurements

Field ID | DataBase | Security | Input | Print | Dim/Steps

Text:

Text Qualifier: None

Max Chars: 50 Max Lines: 1 ☐ Check Spelling on Dbl Click

Date/Time:

Date Qualifier: Custom Date Initial Value: Null

Custom Date: dd slash mm slash yyyy

Time Qualifier:
