# OFDP Updates 5.0.1.1 to 5.0.1.2

From DevWiki

OFDP Updates 5.0.1.1 to 5.0.1.2

- Implemented the ability to specify a value of a field to trigger the *requiredness* or *disabledness* of another field. The test of the value can be "<", "=" or ">".
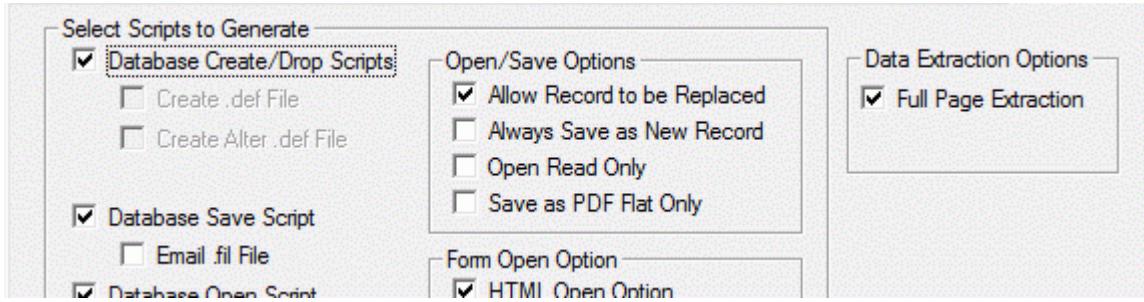

Below is a picture of the implementation inside advanced field properties dialog:

- *Files required for the above feature:*

```
~/RefJavaScript/formvalidation.js    (Version 0.30 or >)
~/RefJavaScript/formdisable.js       (Version 0.40 or >)
```

- Added an option so that we are able to generate a full dump of the data record(s) of a form to a .CSV file from within the Amgraf Portal. This is specified on the "Iform Server Preferences" dialog. The check box on the far right is required to update the database on the portal to make this all possible:

- *Files required for the above feature:*

```
 On Forms portal: ~/cgi-bin/iforms/cgi-bin/extract-CSVData-pl.cgi

Generated script files:

 In Form Folder: create_[formname]-pl.cgi

Tables created/updated in Portal Iforms database: DocumentDataMap
```

- Updated the html meta tags generated when VML output is specified so that display of VML pages looks correct in IE 8.
