

OFDP Updates 5.0.1.7 to 5.0.1.9

From DevWiki

OFDP Updates 5.0.1.7 to 5.0.1.9

- Fixed problem that did not generate the flatten_[xxx]-pl.cgi when the generate for flatten pdf output was selected on the generate scripts tab.
- Modified generation of the Navigation bar buttons for Submit and Save Draft that with test if the form is running off line and will use the OFM_Submit to save the contents of the file. This implies you do not need the submit OML button on the Navigation tab but only in the main form itself and can (or really should) be hidden there.
