

# FUNCTION FOLLOWS FORM

**OneForm Designer Plus starts with a business form, form-based procedure, or printable document. Next, the document image is automatically converted into a software application. It is then easy to interface to web services for user access control, digital signatures, e-commerce, variable data merging, mailroom processing, and many other functions.**

## Forms Applications Development using Amgraf Software Technology

**Business  
Data Capture**

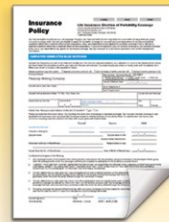

**Intelligent  
Workflow**

**E-Commerce  
Online Ordering**

**Imprinted  
Documents**

**Print on  
Demand**

**Statements  
and Bills**

## OneForm Designer Plus / MECCA 2000 Supports:

### Software Integration

Java  
JavaScript  
ASP  
PHP  
Visual Basic  
Lotus Notes

### Security Features

128 Bit Encryption  
PKI Certificates  
SSL Encryption  
Digital Signatures  
Biometrics  
Voice Signatures

### Output Files Generated

HTML  
PDF  
Perl  
PostScript  
SQL  
TIFF  
XML  
XSL

## Connectivity

Web Services (Ariba, YourPay,  
WorldShip, WSDL, SOAP, LDAP)

Database Support (Oracle, DB2,  
SQL Server, MySQL, ODBC)

Web Servers (MS/IIS, Unix/Linux,  
Lotus/IBM, Apache, Tomcat)

Mailroom Processing (CASS,  
NCOA, Zipcode Sorting)

E-Mail, HTTP, HTTPS

2D Barcodes

**Amgraf's Forms Automation Architecture leverages the strengths of IT Industry Standards, XML, and Open Source software to build and support secure electronic document workflows, web-to-print, print-on-demand, and paper-based document production.**
